

4-Channel ESD/EMI Filter Array plus 4-Channel ESD Array for USB

Features

- Functionally and pin compatible with CSPEMI307A
- Optiguard[™] coated for improved reliability at assembly
- Four channels of combined EMI/RFI filtering + ESD protection
- Four additional channels of ESD-only protection
- 40dB absolute attenuation (typical) at 1 GHz
- 35dB attenuation (typical) at 1 GHz relative to pass band
- ±15kV ESD protection on all channels (IEC 61000-4-2 Level 4, contact discharge)
- ±30kV ESD protection on all channels (HBM)
- 15-bump, 2.960mm X 1.330mm footprint Chip Scale Package (CSP)
- Chip Scale Package features extremely low lead inductance for optimum filter and ESD performance
- Lead-free version available

Applications

- EMI filtering and ESD protection for both data and I/O ports
- Outer 4 channels provide ESD protection for USB lines and other I/O port applications
- Wireless Handsets
- Handheld PCs / PDAs
- MP3 Players
- Notebooks
- Desktop PCs

Product Description

The CM1401-03 is a multichannel array with four lowpass filter + ESD channels and four ESD-only channels. They reduce EMI/RFI emissions on a data port and protect against ESD on a USB port. Each EMI/RFI channel integrates a high quality pi-style filter (C-R-C) which provides greater than 30dB attenuation in the 800-2700 MHz range relative to the pass band attenuation. These pi-style filters are bidirectional, controlling EMI both to and from a data port connector.

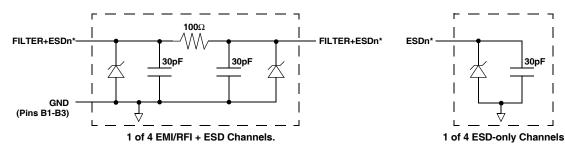

The CM1401-03 provides a high-level of ESD protection on all eight channels for sensitive electronic components that may be subjected to electrostatic discharge (ESD). The input pins safely dissipate ESD strikes of ±15kV, exceeding the maximum requirement of the IEC 61000-4-2 international standard. Using the MIL-STD-883 (Method 3015) specification for Human Body Model (HBM) ESD, the device provides protection for contact discharges to greater than ±30kV.

The CM1401-03 is particularly well suited for portable electronics (e.g., cellular telephones, PDAs, notebook computers) because of its small package footprint and low weight.

The CM1401-03 incorporates Optiguard[™] coating which results in improved reliability at assembly and is available in a space-saving, low-profile chip scale package with optional lead-free finishing.

V _{ESD}	In-system ESD Withstand Voltage a) Human Body Model, MIL-STD-883, Method 3015 b) Contact Discharge per IEC 61000-4-2 Level 4	Notes 2 and 4	±30 ±15			kV kV		
V _{CL}	Clamping Voltage during ESD Discharge MIL-STD-883 (Method 3015), 8kV Positive Transients Negative Transients	Notes 2,3 and 4		+10 -5		V V		
f _C	Cut-off Frequency Z_{SOURCE} =50 Ω , Z_{LOAD} =50 Ω	R=100Ω, C=30pF		58		MHz		

Note 1: $T_A=25$ °C unless otherwise specified.

Note 2: ESD applied to input and output pins with respect to GND, one at a time.

Note 3: Clamping voltage is measured at the opposite side of the EMI filter to the ESD pin. For example, if ESD is applied to Pin A2, then clamping voltage is measured at Pin C2.

Note 4: These parameters are guaranteed by design and characterization.
